### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the claims of 09/190,138 are free of the prior art and the Board of Patent Appeals and Interferences held that the art of record (i.e. Edwards, US Patent No. 5,985,309; Dalby, US Patent No. 5,202,110; and Liversidge, US Patent No. 5,145,684) does not teach or suggest spherical aggregates having a diameter of less than or equal to about 100 microns or address all the limitations of the rejected claims. Furthermore, the claimed dry powder of the instant application and its methods are patentably distinct from the claimed aqueous dispersion of nanoparticulate drug particles claimed in U.S. Patent 6,811,767 (USPN '767), which is commonly owned and has the same inventive entity as the instant application. The claimed product of the instant application may be used as is for the pulmonary administration of pharmaceutical drugs to treat a variety of diseases. Similarly, the claimed aqueous aerosol suspension of nanoparticulate drugs of USPN '767 can be used to administer drugs pulmonarily to treat a variety of diseases and this aqueous suspension may comprise additional active agents dissolved in the aqueous phase. It is noted that although the claims of the instant application suggest that one could reconstitute the claimed dry powder to form aqueous dispersions of nanoparticulate drug, there is nothing in the claims of USPN '767 which suggest the removal of water would yield the claimed powder of the instant application. Thus, an obviousness-type double patenting rejection over USPN '767 would not be appropriate. A similar analysis based upon a comparison of the claims of the instant application and commonly owned US Patent No. 6,264,922 (USPN '922) results in the same conclusion that an obviousness-type double patenting rejection over USPN '922 and the instant application would

Art Unit: 1616

not be appropriate. For these reasons, the pending claims of the instant application have been found allowable.
